JOSHUA JACK

Customer Success Manager | SaaS Onboarding & Implementation | Enterprise Accounts
Rockville Centre, NY | joshuajackt@gmail.com | LinkedIn

SUMMARY

Customer Success Manager owning a $3.8M book of business across 65 enterprise SaaS accounts at 96.9% logo retention. Four years in technical customer success, with a track record of taking customers from signed contract through implementation and go-live in regulated, integration-heavy environments. Builds the playbooks, documentation, and health workflows that let a customer success function scale; uses AI tools daily to draft, document, and streamline customer work.

PROFESSIONAL EXPERIENCE

LeapXpert | **Customer Success Manager** | June 2025 – Present | New York, NY

- Own a $3.8M book of business across 65 enterprise SaaS accounts, leading customers from signed contract through onboarding, implementation, and go-live, then owning adoption, stakeholder alignment, and escalations for regulated financial services customers.
- Maintain 96.9% logo retention (2 churned accounts in the past year) by surfacing adoption blockers, product gaps, and renewal risks early and driving them to resolution with Product and Engineering.
- Lead customers through technical implementation of SSO, bring-your-own-key encryption, TLS archiving, retention controls, and IP whitelisting, translating requirements into customer action plans and internal implementation notes.
- Built success plans, onboarding touchpoints, QBR materials, and health-score-triggered follow-up workflows in Planhat, improving account visibility and executive communication across the book.
- Partner with customers on compliance-oriented workflows (archiving, retention, identity and access controls) to shorten time-to-value and strengthen renewal confidence.
- Run go-live and implementation meetings as the customer's primary point of contact, aligning customer IT, compliance, and business stakeholders with internal Product and Engineering on scope, timeline, and blockers.
- Use Claude Code, Claude Cowork, ChatGPT, and n8n daily to automate account documentation, summarize Gong call recordings into follow-ups, and build onboarding materials, reducing manual CSM workload across the book.

goTenna | **Senior Customer Success Specialist** | June 2022 – May 2025 | New York, NY

- Led customer onboarding and deployment planning under a single-award U.S. Customs and Border Protection SBIR Phase III program valued up to $99M, coordinating device provisioning and training for field units across southern border sectors.
- Authored quick-start guides, SOPs, and multi-tier training programs for federal and law enforcement end users, reducing first-day setup time by approximately 40%.
- Administered Salesforce Service Console and Zendesk to centralize case data, automate post-sale interactions, and improve CSAT and NPS visibility.
- Partnered with QA, Product, and Business Development to validate firmware builds and Team Awareness Kit integrations, converting field feedback into Voice of the Customer reports adopted by Product.
- Built and maintained the goTenna Pro knowledge base and user community content, including technical support articles and deployment documentation.
- Worked with agency trainers to reduce field provisioning errors and raise day-one deployment success.

Thrive | **System Engineer** | December 2021 – July 2022 | New York, NY

- Diagnosed and resolved client workstation, Office 365, remote access, and connectivity incidents within SLA-driven managed-service workflows, maintaining clear client communication throughout.
- Triaged the Remote Service Center ticket board and maintained documentation of configurations, procedures, and system changes.

Best Buy | **Lead Geek Squad Agent** | 2018 – 2021 | Greater New York City Area

- Delivered technical support and repair across consumer devices while maintaining a 95% customer satisfaction rating; mentored junior technicians and maintained service records.

Sandata Technologies | **Helpdesk I** | 2017 – 2020 | Port Washington, NY

- Supported migrations of new users into healthcare software applications, escalated issues by SLA, and handled HIPAA-sensitive client data in compliance with security requirements.
